DIY U is primarily an **online research university**. Therefore, the establishment would be the internet. I conduct my research from my home so my home would be my research facility. My teaching facility is my home and the internet is my teaching facility. I can do in person research, consulting, coaching, teaching and training too if necessary or deemed appropriate.

The main mission of a research university is to produce new and exciting research, and to do that it needs to provide the best equipment to its students and professors.

Research universities have better reputations on a global scale than smaller teaching colleges. Since big discoveries and scientific breakthroughs often take place at research universities, they get more recognition abroad than other colleges that might have excellent undergraduate programs but less robust research capabilities.

Diyu can and will have a big impact on society. Big discoveries will be made at Diy u. Basic research is the research activity that is pursued at Diy u. I will write more of these short reports over the course of time.

Internet and offline research methods are used at Diy u. If we can have access to research materials from other universities, our research will be even more powerful.
